

M1 kompressionslås

<http://www.southco.com/product/partlist.aspx?cid=7379>

In response to requests from satisfied M1 latch users in the marine market, the new M1-15 stainless-steel push-to-close latch offers the functionality of the larger versions, only in a more compact size that's ideal for smaller cabinet doors and drawers. This downsized, lockable, push-to-close SS latch fills a unique niche in the marine market. Its robust design and high load rating allow it to resist the impact force generated when contents of a cabinet shift due to rough water. Any boat manufacturer who has received complaints about the contents of cabinets spilling out while the vessel is underway will appreciate this stylish yet strong corrosion-resistant solution. Of course, those same attributes also make the M1-15 an excellent option for foodservice, medical and other applications where style and durability are needed in a compact robust SS push-to-close design.

Key Product Features and Benefits

- CF-8M body construction (cast-equivalent of 316-SS) provides corrosion resistance for marine environments, industrial equipment, or for medical/foodservice applications where frequent cleaning with strong solutions is required
- Push-to-close action enhances user convenience in frequently accessed applications
- Flush-mounted pull-ring offers a firm grip for easy opening
- Compact size fits smaller cabinet doors and drawers
- Accommodates door thicknesses from 0.5 mm to 19 mm (0.02" to 0.75")
- Maximum working load rating of 545 N (122 lbs.), withstands accidental opening, even in marine applications or mobile medical equipment where cabinet interior contents might shift
- Stylish design and finishes complement other Southco hardware to provide a cohesive, aesthetic look throughout an installation
- Single round mounting hole simplifies installation
- Rear-mount retention ring provides a clean exterior installation, with no visible mounting hardware

Available Options

- Available with or without keylocking option for access control
- Standard Finish option of polished stainless steel, with brushed nickel, satin nickel, diamond brass, and black available upon request

Target Opportunities

- Foodservice
- Industrial Equipment
- Marine
- Medical
- Recreational Vehicles

On its own, the new M1-15 latch design offers appealing performance characteristics for marine and other harsh environment applications. But as part of the larger M1 family it creates another opportunity to communicate the growing options available as part of Southco's ever increasing line of stainless steel solutions. When competing to provide the entire access hardware solution throughout a boat cabin, let the robust design and fingertip convenience of the M1-15 for the smallest cabinet door applications complement the rest of the M1 line and other Southco round SS hardware designs. And whatever the application, it can also serve as an introduction to the best of Southco innovation in push-to-close convenience or robust SS performance for all other Southco latch, hinge, and hardware solutions.
