

EA-P1 PIN/Prox Reader Simplifies Access Management

<http://www.southco.com/class/ea-p1-proximity-reader-7639.html>

The new *SOUTHCO*[®] EA-P1 PIN/Prox Reader enables keyless entry for streamlined access management. The combination keypad proximity card controller provides a basic input for Southco electromechanical latch (eml) products. The cost-effective reader enables heightened security and, since the PIN Prox combination is flexible, accommodates multiple users with ease. The EA-P1 can be programmed with up to five unique PIN codes and 9,999 prox cards, and the self-contained unit allows for simple installation and programming. Supervisors simply enter their codes and program employee cards right at the keypad without the need for software and with the feedback of an LED and audible beeper. A relay output integrates directly with electronic locks, and programmable output timing accommodates multiple access requirements

- Simplified access management with keyless entry
- Flexible PIN Prox combination accommodates multiple users
- Self-contained unit for simple installation and programming
- Programmable output timing for multiple access arrangements
- Visible and audible feedback during programming

Customization Options

- Custom colors
- Custom logos

Target Opportunities

- Enclosures
- Medical Facilities
- Self-Service
- Secure Storage
- Furniture

Promotion Plan and Sales Tools

Our promotional plan includes:

- Press release to a range of horizontal publications
- Product literature as part of Handbook 59
- New product eAlert
- New product promotion on Southco.com

The EA-P1 PIN/Prox Reader should be targeted at applications requiring a simple combination keypad proximity card reader to use with Southco electromechanical latches.

It is ideally suited for applications with multiple access requirements and the need for a simplified way to manage access; such as medical storage cabinets and server enclosures.

Customers looking to simplify the transition from mechanical to electronic access would be well served by the user-friendly simplicity of the reader's installation, programming and use.

Additionally, the EA-P1 is an affordable access control device for designers keeping an eye on the bottom line. Overall, the EA-P1 is a cost-effective, easy-to-use way to implement electronic access control with Southco electromechanical latches.
