

N2 Lift & Turn Compression Latch

<http://www.southco.com/class/n2-heavy-duty-lift-turn-compression-latches-7616.html>

The *SOUTHCO*[®] N2 Lift & Turn Compression Latch, available in a standard size, is now also available in a medium size for greater design flexibility.

Ideal for off-highway and industrial equipment, the N2 brings durable construction, simple mechanical action and consistent pull-up compression for reliable closure.

Both sizes of the N2 latch use a rugged "lift and turn" compression mechanism that tolerates higher loads and withstands stress, strain, shock and vibration.

The snug compression of the latches minimizes rattle and makes them ideal for engine covers, access panels and storage compartment doors.

A T-shaped handle provides an easy grasp for convenient operation even with bulky work gloves on this new medium cup style. The folding design of the N2 T-handle and the recessed cup minimize protrusion above the door surface when not in use.

Key Product Features and Benefits

- Simple mechanical action and consistent pull-up compression for snug closure
- Bigger cup for more ergonomic and easier operation, even with gloved hands
- Multiple pawl options and adjustments accommodate varied applications
- Rugged "lift and turn" compression mechanism tolerates higher loads and simplifies operation in repetitive use applications
- Substantial T-handle provides ample grip
- Folding handle minimizes clearance requirements
- Easy-to-install design

Available Options

- Two different sizes (medium and standard)
- Locking or non-locking style with custom keycode and color
- Available with recessed cup for flush installation
- Multiple straight and offset pawl styles (sold separately) with flexible mounting

Target Opportunities

- Off-highway equipment
- Trucks
- Emergency vehicles
- Tow trucks
- Military vehicles
- Gensets
- Railway
- Industrial equipment

Promotion Plan and Sales Tools

Our promotional plan includes:

- Press release to a range of horizontal publications
- New product eAlert
- New product promotion on Southco.com

Both the standard and new medium-sized N2 should be marketed to off-highway, transportation and industrial applications subject to stress, shock and stress. Heavy-duty applications such as engine covers, storage compartments and access panels would be particularly well served by the N2's rattle-free resistance to extreme vibration. The N2 is ideal under sever working conditions, and its new, bigger cup enables an ample grip when an operator is working with gloved hands.
