

## EM GEN II E-KEEPER Now Available for up to 24 Volt DC operation

<http://www.southco.com./class/em-e-keeper-electronic-strike-7578.html>

The *SOUTHCO*<sup>®</sup> EM GEN II E-Keeper delivers the convenient, affordable electronic access security of its predecessor in a new 'expanded voltage range' 24V version.

The GEN II E-Keeper accepts signals from a variety of user-specified input devices ranging from numeric keypads and mag-stripe cards to RF key fobs, biometric scanners and networked security scanners.

The newest electronic strike enables design engineers to transition from mechanical to electronic access without an enclosure redesign, complex software or major financial investment.

Frame-side mounting simplifies wiring installation and protects wiring from wear or damage caused by repetitive door operation.

The E-Keeper offers single or multi-point latching with a concealed installation option for a clean appearance. It works with a variety of door-mounted mechanical latches and permits electronic monitoring, remote monitoring, audit trails and alarming. A mechanical latch on the enclosure door engages with the latch bolt on the E-Keeper and serves as a master lock access and manual override during a power failure.

### Key Product Features and Benefits

- New gear train provides quieter operation
- Convenient transition from mechanical to electronic access
- Simplified push-to-close operation regardless of latch interface
- Flexible functionality accepts signals from any electronic actuation source
- Compact design ensures convenient, affordable security
- Simple retrofit with existing mechanical latch installations
- Frame-side mounting for simplified wiring installation
- New wider input voltage range from 12 to 24V DC

## Target Opportunities

- Enclosures
- Medical
- Self-Service Equipment
- Kiosks
- Secure Storage Compartments
- Vending / Gaming Machines

## Promotion Plan and Sales Tools

Our promotional plan includes:

- Updated literature on Southco.com

The 24V GEN II E-Keeper serves as an economical add-on solution for original equipment manufacturers. It provides customers with the option to retrofit electronic access into existing mechanical latch installations without changing existing enclosure designs—a huge cost benefit.

Additionally, the new E-Keeper is easily configurable and provides affordable access control options to match varied security needs. A side mount version of the E-Keeper satisfies the specs of low profile cabinets where a front mount is impractical, such as with postal boxes and lockers.

Ideal for IT enclosures, vending machines, secure storage and medical applications, the GEN II E-Keeper delivers versatile configuration, convenient installation and secure performance.
